Hard landscaping is an art, enhancing and improving what Mother Nature intended, using creativity and the finest materials available. Materials like those offered by Grundon, a leading supplier to the landscaping sector for more than 15 years.

We recognise your desire to create landscapes that are beautiful yet practical, aesthetically pleasing yet durable.

Against this background, we have refined our product line to ensure that we offer you and your customers the finest hard landscaping materials available.

- *Golden Shingle* – Golden colour
- *Coxwell Self-Binding Gravel* – Brown colour
- *Rockery Stone* – Brown colour
- *Decorative Aggregates* – Boulders, cockleshells, puddle clays, beach cobbles and pebbles

GRUNDON

Landscaping Products

The Grundon product range includes:

Soils

A range of blended screened soils.

Shingles

We offer a wide range of shingles from our quarries across the South of England in 10, 12 and 20 mm grades and are ideally suited to applications including paths and drives. For a rich golden colour on paths and private drives, the Golden Shingle from our Padworth Quarry is the perfect solution.

Path Gravel

Coxwell Self-Binding Gravel is a unique product that is used extensively to create hardwearing and naturally beautiful pathways. Brown in colour and easy to lay, Coxwell Self-Binding Gravel requires little or no maintenance and matures to provide a strong, natural appearance.

Rockery Stone

Our Rockery Stone is available in various sizes, from small to very large. Brown in colour, Grundon rockery stone weathers quickly and is not susceptible to frost.

Decorative Aggregates

The Grundon product range is complemented by a full line-up of boulders, cockleshells, puddle clays, beach cobbles and pebbles.

The beach cobbles and pebbles from our Henham Quarry in East Anglia typify the quality of the Grundon hard landscaping product line. The material is a rounded, very hard, naturally occurring flint that is washed and screened for optimum quality. These cobbles and pebbles are used extensively for cobble walling and paving and are ideally suited to use in water features and decorative applications in gardens and public pedestrian areas.

So whether you are creating a water feature in a private house, a driveway at a golf course, or a cobbled area for pedestrians, specify quality. Specify Grundon.
