

Cement bonded asbestos

Dedicated waste collection service

Key features of this service:

- fully trained, ADR drivers
- covered containers for transportation
- choice of skip or rolonof, in various sizes
- Monday and Wednesday collections
- disposal to fully-licensed landfill
- full documentation for your records
- helps ensure your compliance with all current legislation (Hazardous Waste and Landfill Directives)

For cement bonded asbestos waste arising from:

- roofing & wall cladding
- linings to walls and ceilings; partitions
- bath panels; soffit boards; fire surrounds; flue pipes; cold water tanks
- drainpipes; guttering; water tanks.

Cement bonded asbestos is classified as a hazardous waste. Consequently, when disposed of as waste it should be handled, stored and transported to a licensed disposal facility by specially trained and qualified personnel, using a hazardous waste consignment note issued by the Environment Agency. Cement bonded asbestos does not need to be double bagged nor does it have to be paced in a lidded skip, however we will cover the container during transportation.

Grundon is the only company able to offer a truly local service for this material, using its own hazardous waste landfill site near Cheltenham.

We are also able to collect fibrous asbestos, but this will be disposed of at a third party facility. Please contact us for details.
